Knowledge gap

- The response of plant-pollinator networks to land use change and fragmentation has been well-studied
- **Yet little is known about the role of plant functional traits—beyond floral traits—in structuring plant-pollinator networks.**

Network structure & resilience

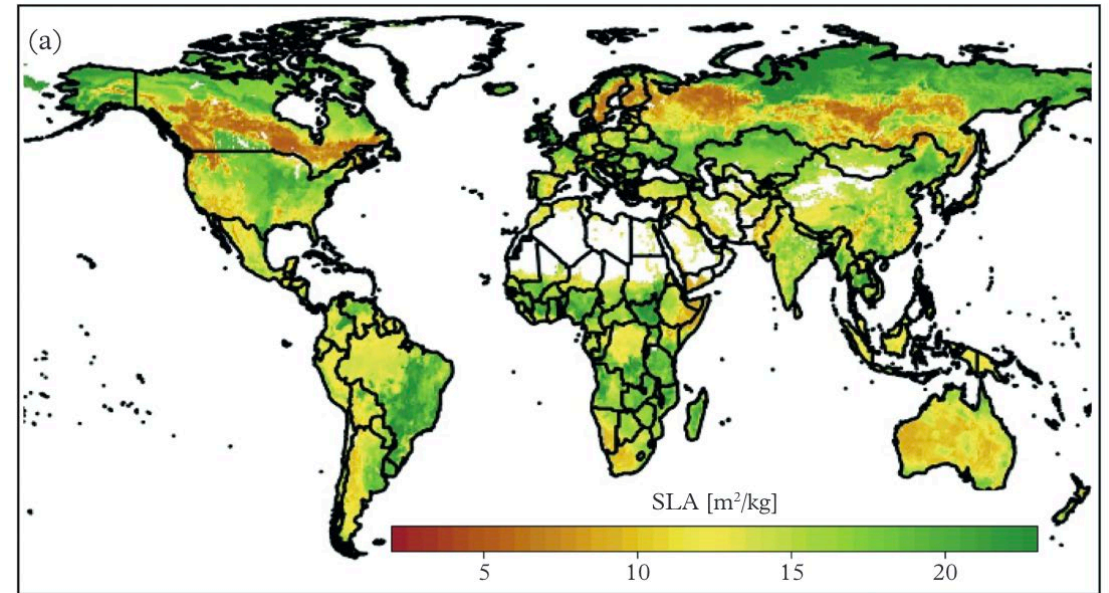

Plant functional traits

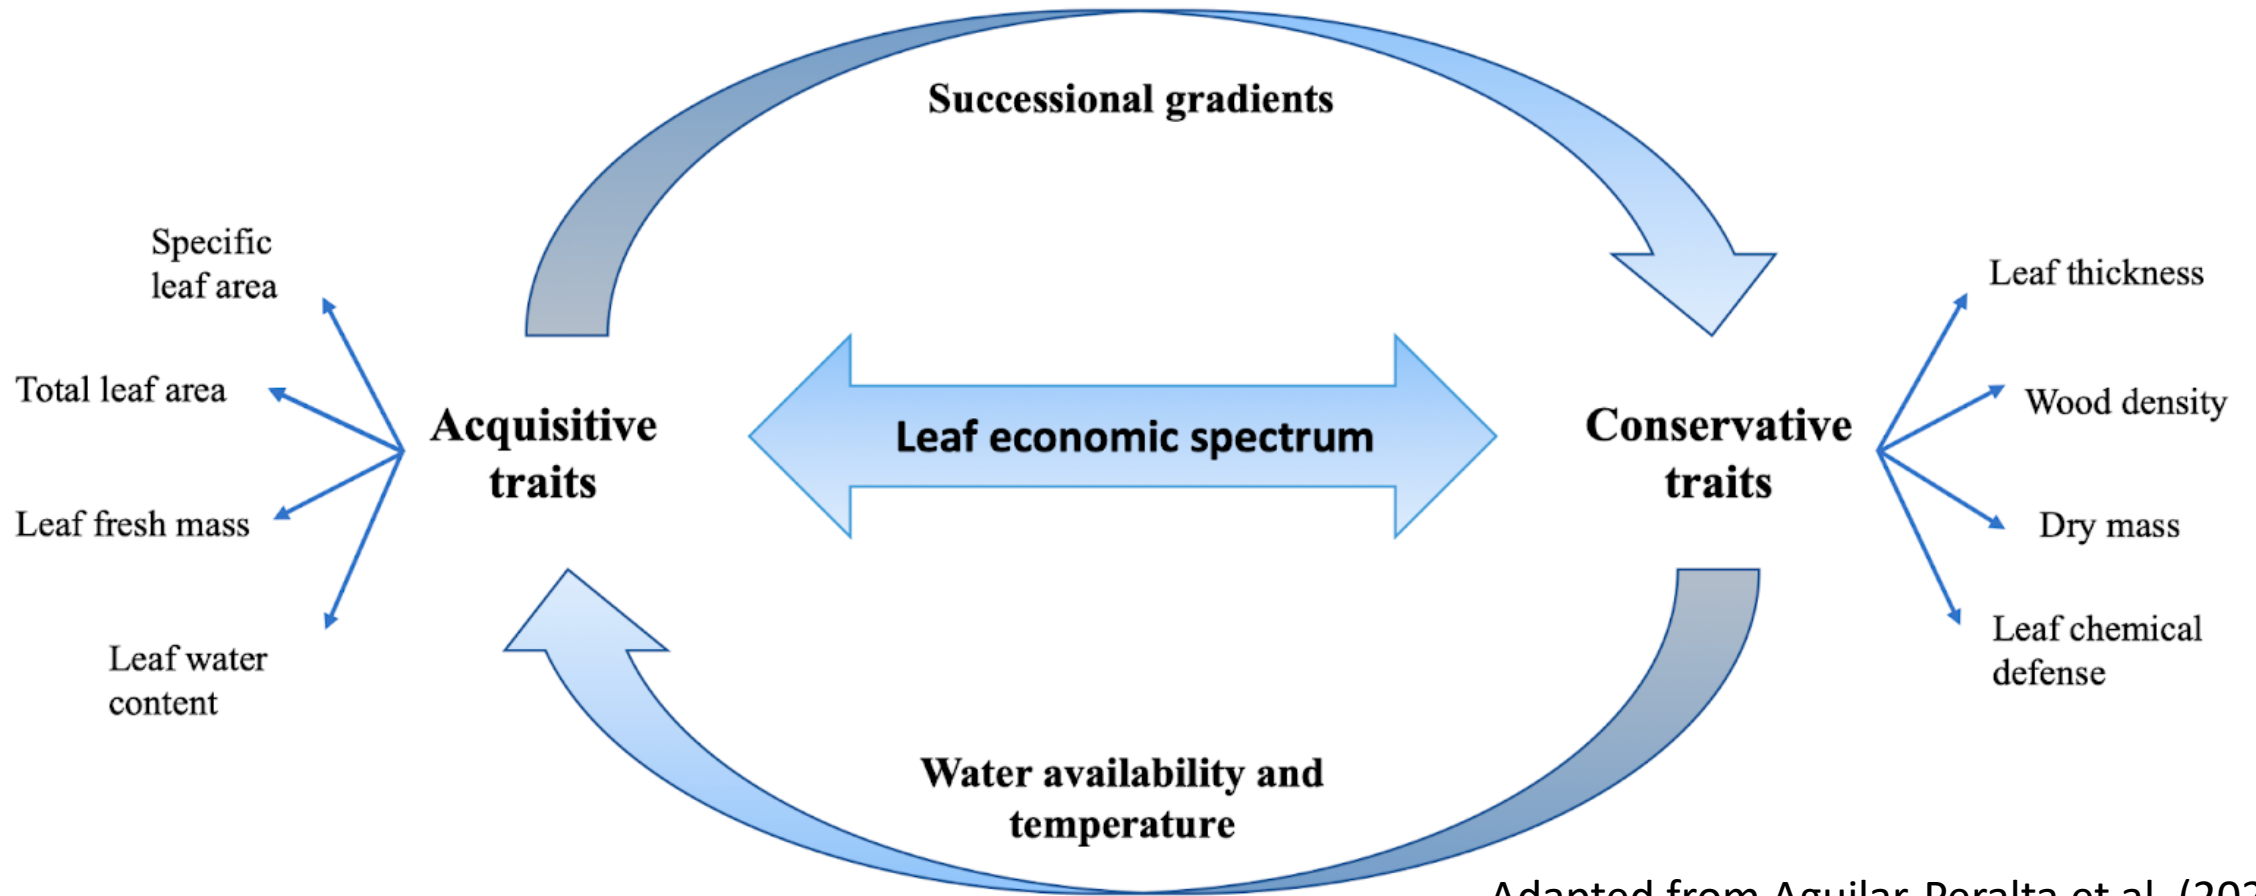

Environmental variables

What are plant functional traits?

- ❖ Plant functional traits can be considered part of plant's evolved responses to disturbances as well as climate and resource availability (nutrients and water).
- ❖ Plant functional traits make up *plant strategies* (Laughlin, 2023).

Adapted from Aguilar-Peralta et al. (2022)

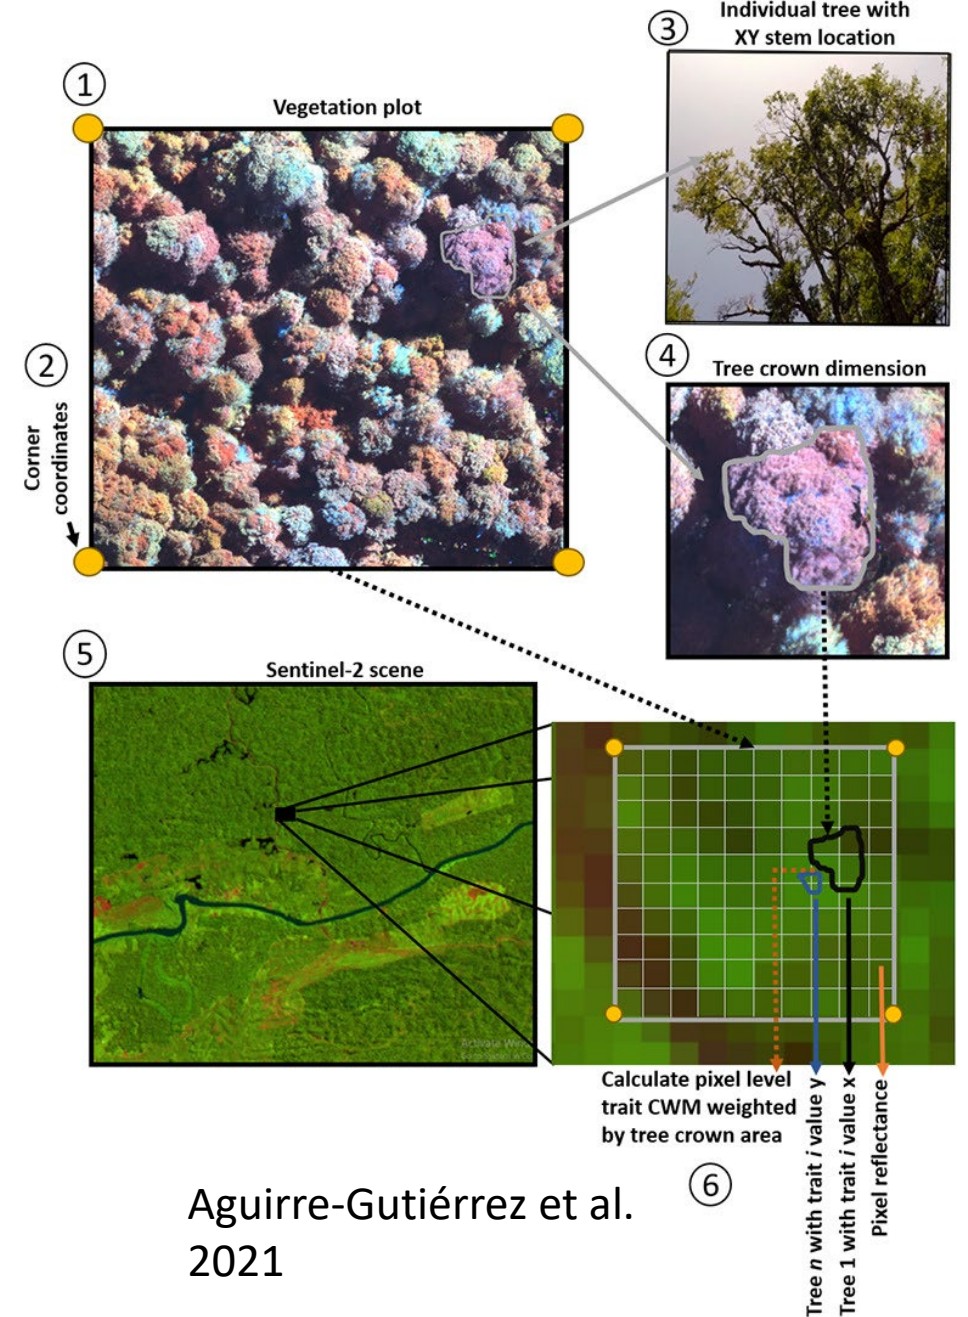

Plant functional traits and pollinator ecology

Machida et al. 2024, in review.

Remote sensing of plant functional traits

- ❖ One major knowledge gap has been how to predict plant functional traits at broad spatial scales (Jetz et al. 2016)
- ❖ We can now do this utilizing remote sensing techniques (Aguirre-Gutiérrez et al. 2021).

Aguirre-Gutiérrez et al. 2021

Methods

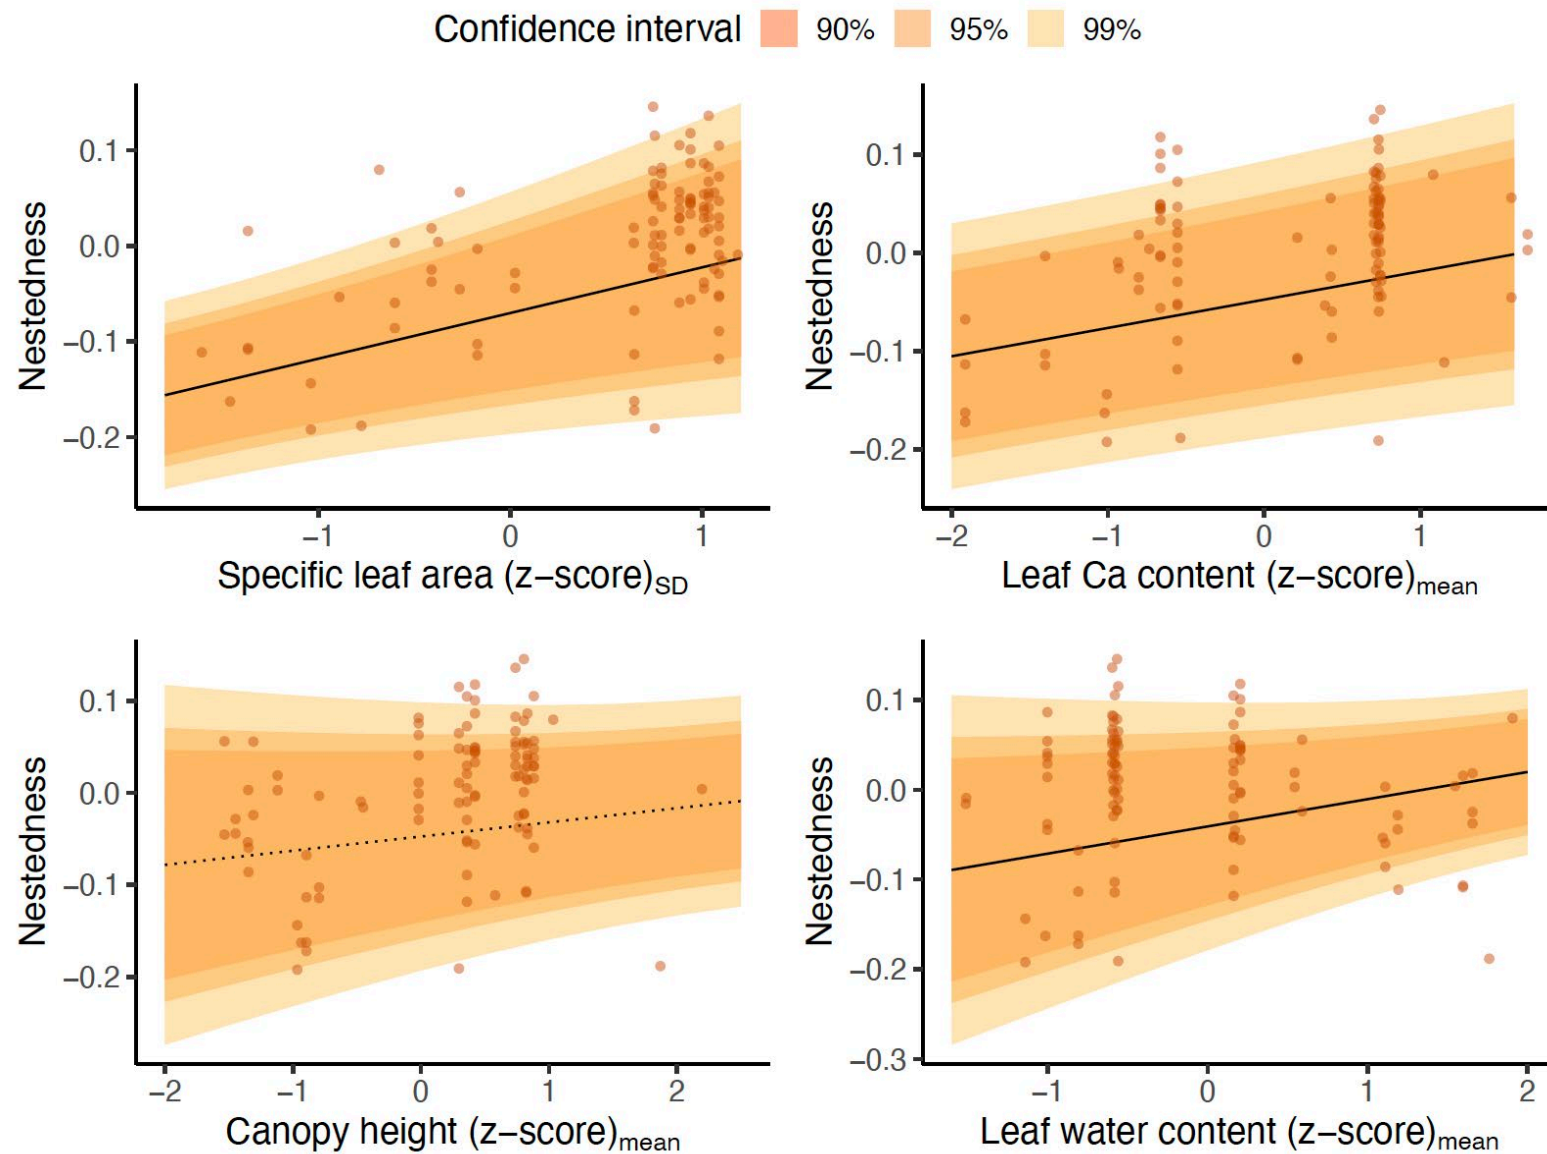

- ❖ Plant trait predictions (Aguirre-Gutierrez et al. 2021)
 - ❖ Combines **Sentinel-2 satellite remote sensing data, TerraClimate and Global Environmental Monitoring (GEM) database**, and high-resolution elevation data.
 - ❖ Vegetation structure: **LiDAR** from GEDI
 - ❖ Calculated plant trait (mean and SD) in 3km buffer zone around each pollination network using **Google Earth Engine**.
- ❖ Plant-pollinator network data
 - ❖ **209 plant-pollinator networks** in **48 sites**, sampled repeatedly over time across the tropics.
- ❖ Linear mixed effect models
 - ❖ Network metrics **connectance, nestedness, specialisation and modularity**

Conclusions & Future Work

- ❖ **Plant strategies play an important role in structuring biotic interactions**, such as those between plants and pollinators
- ❖ **Potential of remote sensing to predict plant-pollinator interactions** at broad scales
- ❖ **Future Directions**
 - ❖ 1. More field-based studies to better understand mechanisms between plant functional traits, vegetation structure, and plant-pollinator interactions
 - ❖ 2. Expanding plant functional trait data coverage
 - ❖ 3. Pollination services: relating plant functional traits and vegetation structure to yield
