Kelp forests

Eger et al. 2024

Gi

Bu

Optical RS mapping kelp forests

- **Overview RS applications for kelp forests**
 - **Kelp Mappers Guidebook (Reshitnyk et al., 2023; Cavanaugh et al. 2021; Schroeder et al., 2019)**
- **Landsat -**
 - **Pro: Global continuous coverage, 1984-present, historical context**
 - **Con: limitations of 30 m resolution in complex coastline, no species data**
 - California (Bell et al., 2023, 2020, 2015; Finger 2021; Cavanaugh et al., 2019, 2010); Oregon (Hamilton et al., 2020); Falkland Islands (Houskeeper et al., 2022); Central Coast BC (Nijland et al., 2019); North Vancouver Island (Man et al. in review)

Objective

What is the distribution of BC's kelp forests and are they changing throughout time?

- Landsat time series (30 m)

How do Landsat (30 m) kelp canopy time series compare to fixed-wing (0.1 m) species-level time series?

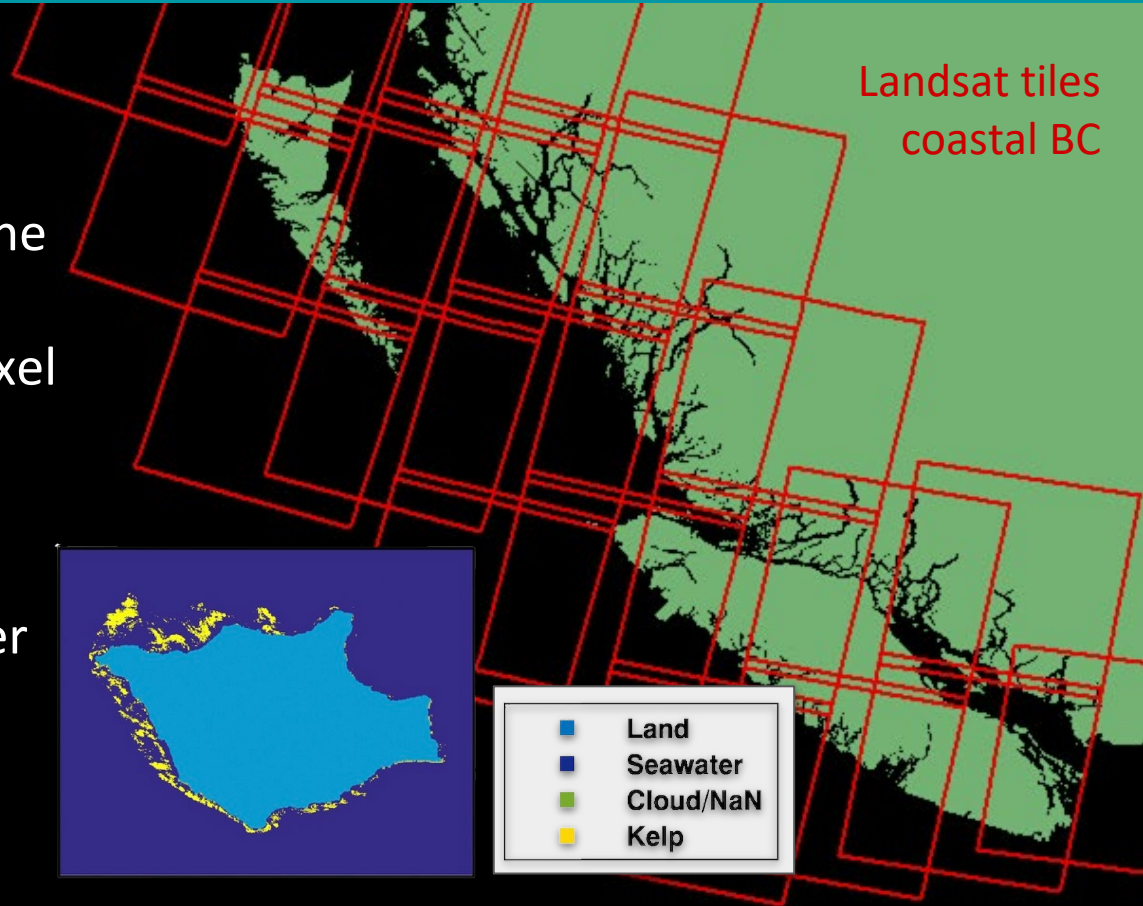

Landsat tiles
coastal BC

Aerial (0.1 m)

Methods (Bell et al., 2023)

1. Landsat (4/5,7,8,9) surface reflectance data
 - a. All imagery with coastline visible
 - b. Clouds masked using pixel QA band
2. Land and intertidal mask:
ASTER DEM + MNDWI
3. Binary decision tree classifier
 - a. Four classes
 - b. Manual clean up

Methods cont'd

Annual time series:

- Year removed if :
 - >25% of pixels did not have cloud-free acquisition over two quarters and/or during the 3rd quarter (summer)
- Trend: Generalized least squares regression with ARto account for temporal autocorrelation
- Methods used in KelpWatch report cards (WHOI and TNC California, 2023)

Persistence (kelp detections over entire time series)

coastal BC

Results - North Coast

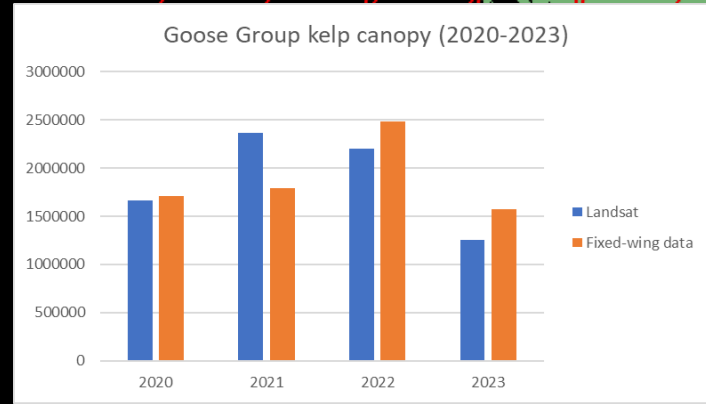

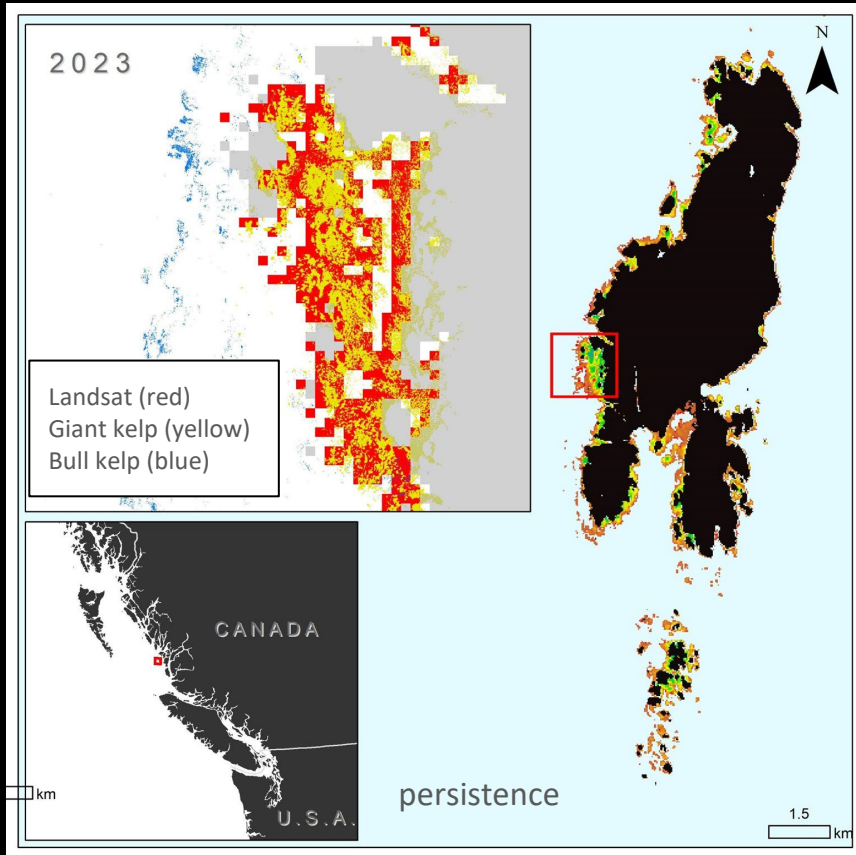

Results - Central Coast

Results - Central Coast

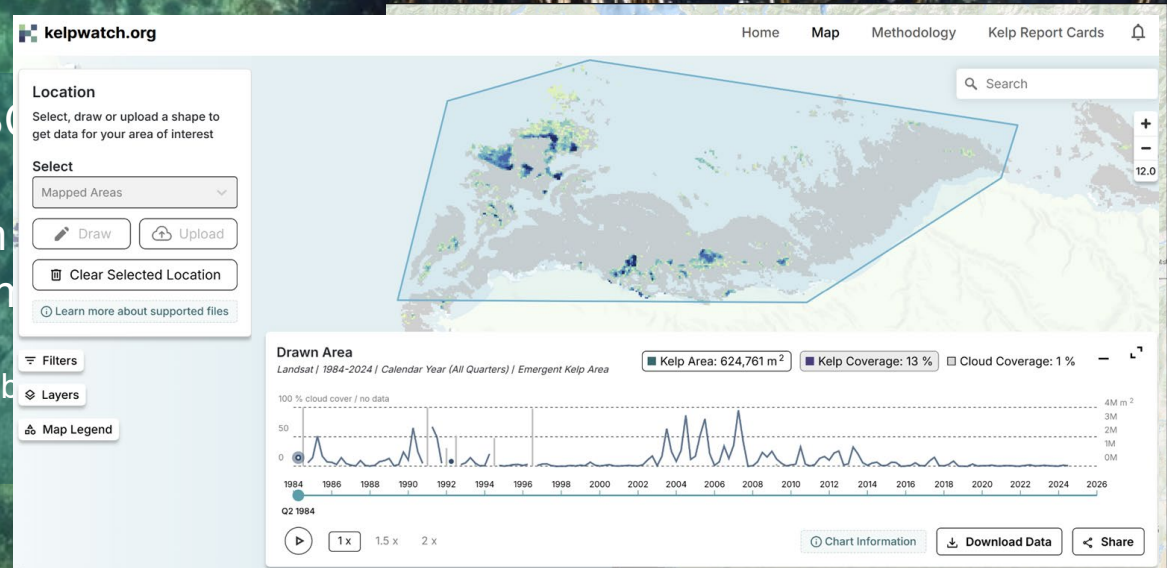

Results - Central Coast

Main takeaways

- First look at first (part of) BC Landsat dataset
- See regional differences in kelp
- Leverage high-resolution imagery
 - Validate Landsat products
 - Understanding species distribution dynamics

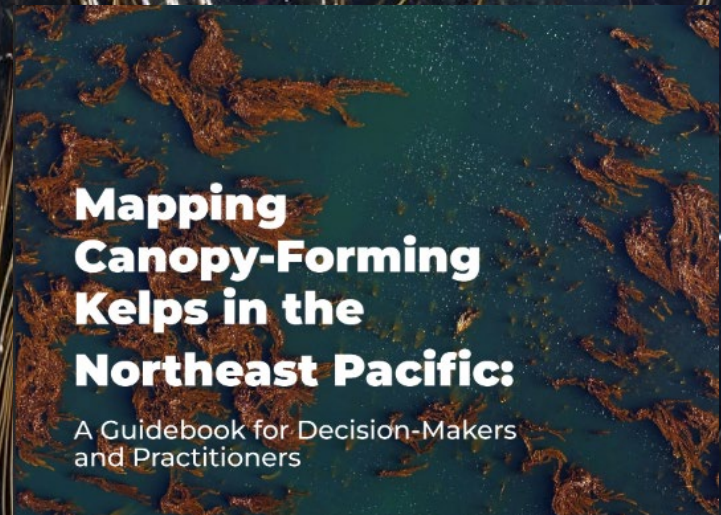

Future work

- 6 months - complete the BC Landsat time series
- Collaborative research to examine drivers across BC - group publication
- Higher spatial + temporal resolution needed
 - CSA proposal with UVic Spectral lab & MaPP (pipeline + platform for Sentinel 2, PlanetScope kelp data)
- Data on KelpWatch

Recommendations

- Sharing knowledge
 - Support Communities of Practise
 - 7th annual International Kelp Mappers Meeting
 - UVic Spectral Lab & Hakai
 - Kelp Mappers Guidebook + publication
- Continue to learn and engage in conversations about EO data and indigenous data sovereignty
- Mobilizing data + tools
 - Highlight and support the use of expert/community data products
 - Accelerate the creation and dissemination of EO-derived datasets for biodiversity status
 - E.g. KelpWatch + Kelp Report Cards

Thank you!
